

```
#include <iostream>
#include <vector>

using namespace std;

vector<int> append(vector<int> a, vector<int> b) {
    vector<int> retVal;

    for (int x : a) {
        retVal.push_back(x);
    }

    for (int x : b) {
        retVal.push_back(x);
    }

    return retVal;
}

int main() {
    vector<int> a = {10, 11, 12, 13};
    vector<int> b = {10, 11, 12, 13, 14};

    vector<int> c = append(a, b);

    for (int x: c) {
        cout << x << endl;
    }

    return 0;
}
```
