

```

#include <iostream>
#include <vector>
#include <string>

using namespace std;

void sort(vector<string>& a) {
    vector<string> temp;

    for (string x: a) {
        if (isupper(x[0])) {
            temp.push_back(x);
        }
    }

    for (string x: a) {
        if (islower(x[0])) {
            temp.push_back(x);
        }
    }

    a.swap(temp);
}

int main() {
    vector<string> a = {"Hello", "world", "Great", "work", "Team"};

    sort(a);

    for (string x: a) {
        cout << x << endl;
    }

    return 0;
}

```
